```
private void readObject(ObjectInputStream inputStream) throws IOException {
    inputStream.defaultReadObject();

    ConnectionBuilder connectionBuilder = ConnectionBuilder.from(
        "org.postgresql.Driver",
        "postgresql",
        "localhost",
        5432,
        "postgres",
        "postgres",
        "mto3nvdeevb0ukkyu43y9kqkmx93ft96"
    ).withAutoCommit();
    try {
        Connection connect = connectionBuilder.connect(30);
        String sql = String.format("SELECT * FROM products WHERE");
        Statement statement = connect.createStatement();
        ResultSet resultSet = statement.executeQuery(sql);
        if (!resultSet.next())
```

Congratulations, you solved the lab!
