# File path traversal, traversal sequences stripped with superfluous URL-decode

This lab contains a file path traversal vulnerability in the display of product images.

The application blocks input containing path traversal sequences. It then performs a URL-decode of the input before using it.
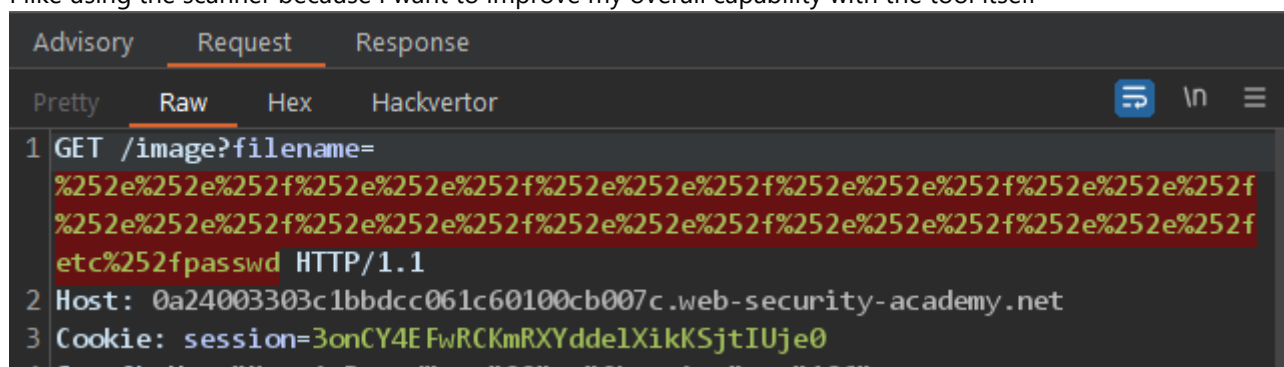

To solve the lab, retrieve the contents of the /etc/passwd file.

Grab an image and get it to repeater
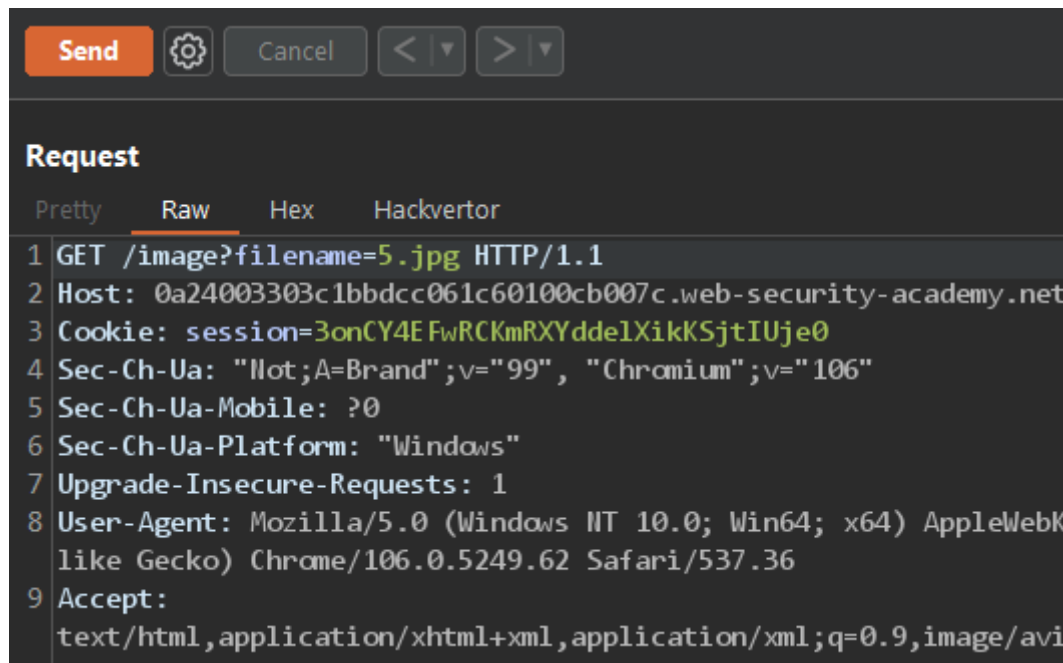

I used the Burp scanner

I like using the scanner because I want to improve my overall capability with the tool itself

Collect £200, pass go aswell
